E-learning

CareFall is an interactive e-learning tool designed for foundation level doctors, but appropriate for all healthcare professionals. It has been developed in partnership with consultant geriatricians, junior doctors and the patient safety team at NHS England.

The tool covers the knowledge needed to identify and reduce patient and environmental risk factors to assist with reducing inpatient falls. CareFall: Reducing inpatient falls risks and post fall management. Falls are the most commonly reported type of patient safety incident in healthcare. Although most falls do not result in injury, patients can have psychological and mobility problems as a result of falling.
