### **Telemedicine in Your Practice**

Video Visits, Telephone Visits, and Remote Patient Monitoring have become much more widely used in the past year, and want to help reach the next level of technology-enabled practice. From questions about optimal patient care and clinical skills, to guidance on coding or technology options, the information and CME programs offered will support telemedicine practice.

Artificial Intelligence and Technology-enabled Medicine & Remote Patient Monitoring: Recorded webinar explores how an AI-powered platform makes sense of scattered patient data and reduces cognitive burden at point of care. As part of our telehealth education program. These interviews cover practical information on how physicians and patients use the technology, costs and potential revenue.
